

NAIMI NAFIS NORLISAM

Kyoto-shi, Sakyo-ku, Japan | (+81) 070-9020-7072 | naiminafis@gmail.com | [Github](#) | [Linkedin](#) | [Portfolio](#)

EDUCATION

KYOTO INSTITUTE OF TECHNOLOGY | Kyoto, Japan

Expected Graduation: March 2026

Bachelor of Engineering in Information Science

- JPA (Malaysian Government) Scholar
- Relevant Courseworks: Data Structures and Algorithms, Information Security, Distributed Systems.

UNIVERSITY OF MALAYA | Kuala Lumpur, Malaysia

April 2020 – March 2022

Special Preparatory Program to Enter Japanese Universities (AAJ)

PROJECTS

Lyrika: AI-Powered Music Discovery Tool | [Github](#)

July 2025

3rd Place Award-Winning Project, Giiku CAMP Vol. 6 Hackathon

- Architected an award-winning, full-stack music discovery browser extension tool, securing 3rd place in a competitive hackathon by architecting a JavaScript client with a Python Flask backend.
- Orchestrated the integration of three distinct APIs (ACRCloud, Genius, Gemini), implementing asynchronous calls to ensure real-time data fetching without blocking the UI.

QRious: Privacy-Focused QR Utility App | [Github](#)

June 2025

KIT-ISEL Undergraduate B4 Competition

- Developed a privacy-first QR utility for iOS by implementing a fully on-device security system to analyze URLs and validate connections without external API dependencies.
- Designed a scalable and maintainable application using the MVVM design pattern and Flutter's Provider, making a clean separation between data models, UI components and business logic.

Readoku: AI-Powered Translation Assistant | [Github](#)

May 2025

TrackJob Hackathon Project

- Built a browser extension to accelerate Japanese language learning, enabling users to get instant, context-aware translations of selected text on any webpage.
- Engineered a low-latency user experience by implementing efficient API call management and caching, reducing average translation response time by 30% compared to initial prototypes.

RESEARCH EXPERIENCE

Intelligent Software Engineering Laboratory | [KIT-ISEL](#)

April 2025 - Present

Undergraduate Researcher (KIT-ISEL) | LLM-based Code Analysis

- Analyzing the robustness of modern code LLMs like Code Llama against "comment traps" by using explainability techniques (SHAP) to diagnose whether the model's reasoning prioritizes functional code over superficial text.

EXTRACURRICULAR ACTIVITIES

M(ulticultural) Café | Kyoto Institute of Technology

Present

Communication Facilitator

- Facilitated cross-cultural dialogue and language exchange between Japanese and international students, fostering an inclusive and welcoming community environment.

Malaysians in Kyoto Association | MyKyoto

April 2023 - March 2024

President 2023/2024 Session

- Led a student association as President, successfully planning and executing 5+ multicultural events for over 50 attendees to promote international exchange and cultural understanding.

TECHNICAL SKILLS

Programming Languages: Python, Java, JavaScript, Ruby, C, Dart

Front-End: HTML/CSS, React, Flutter

Back-End: Flask, SQLite

Developer Tools: Git, GitHub, Docker

Environments: Unix-like (Linux, macOS)

Spoken Languages: Malay (Native), English (Fluent), Japanese (JLPT N2)
