

# MUHAMMAD NAIMI NAFIS BIN NORLISAM

Kyoto, Japan | (+81) 070-9020-7072 | naiminafis@gmail.com | [Github](#) | [Linkedin](#) | [Portfolio](#)

## EDUCATION

---

**Kyoto Institute of Technology | M.S. Computer Science & Engineering** Apr 2026 – Mar 2028 (Expected)  
*Entering master's program April 2026, continuing from undergraduate at the same institution*

**Kyoto Institute of Technology | B.Eng. Information Science** Apr 2022 – Mar 2026

**University of Malaya | Pre-University Program (AAJ)** Apr 2020 – Mar 2022  
*Special Preparatory Program to Enter Japanese Universities (AAJ)*

## TECHNICAL SKILLS

---

**Languages:** Python, JavaScript, Dart, Java, C, Ruby

**Front-End:** React, Flutter, HTML/CSS

**Back-End:** Flask, PostgreSQL, SQLite

**Cloud & Infra:** Docker (containerization for lab server deployment), Git, GitHub, Linux/macOS

**Spoken Languages:** Malay (Native), English (TOEIC 965), Japanese (JLPT N2)

## PROJECTS

---

**Lyrika: AI-Powered Music Discovery Tool | [Github](#)** July 2025  
*3rd Place in Giiku CAMP Vol. 6 Hackathon (24 teams)*

- Built a browser extension with a JS frontend and Python Flask backend that identifies songs in real time and surfaces lyrics and AI-generated context.
- Integrated ACRCLOUD, Genius, and Gemini APIs using async calls so song recognition, lyrics, and AI insights load in parallel without freezing the UI.

**QRious: QR Utility App | [Github](#)** June 2025  
*KIT-ISEL Undergraduate Hackathon*

- Built an iOS app that scans QR codes and checks URLs for safety entirely on-device with no external API calls, so it works offline and keeps user data private.
- Structured the app with MVVM and Flutter's Provider to keep the UI, business logic, and data layers separately making it straightforward to add features without breaking existing ones.

**Readoku: AI-Powered Translation Assistant | [Github](#)** May 2025  
*TrackJob 5/2025 Hackathon*

- Built a browser extension that translates selected Japanese text in-context on any webpage, designed for learners who want to read native content without switching tabs.
- Added response caching and request batching to cut average translation time by 30% vs. the first prototype.

## RESEARCH EXPERIENCE

---

**Intelligent Software Engineering Laboratory | [KIT-ISEL](#)** April 2025 - Present  
*Graduate Researcher | LLM-based Code Detection and Analysis*

- Built a Python evaluation pipeline to test whether leading LLM-generated code detectors (CodeGPTSensor, DetectCodeGPT, DroidDetect) can be misled by identifier renaming; automating dataset preparation, renaming transformations, and result logging across multiple detector configurations.

## EXTRACURRICULAR ACTIVITIES

---

**M(ulticultural) Café | Kyoto Institute of Technology** April 2025 - Present  
*Communication Facilitator*

- Run weekly language exchange sessions pairing Japanese and international students, typically with 6 participants per session.

**Malaysians in Kyoto Association | MyKyoto** April 2023 - March 2024  
*President*

- Led a 10+ member Malaysian student association, organizing 5+ multicultural events with 50+ attendees including a welcoming party, cultural food festival, and language workshop.
